

## Getting Started with Zaps It

**Thank you for purchasing a Zaps It.** We know you will love this exceptional bio-enzymatic solution.

**INSTRUCTIONS:** Zaps It eats odor-causing bacteria; it is not **JUST** a deodorizer. Therefore, it should be applied directly on the source of the odors. For example, carpet stains where accidents have occurred, outdoor potty areas, drains where odor is lingering).

**Dispensing Options:** Zaps It can be used to deodorize outdoor potty areas through a water hose dispensing system set anywhere between 1:32 (4 ounces per gallon) or stronger, depending on the nature of the odors being dealt with. A recommended strong dilution rate is about 1:10 (around 12 oz. per gallon)

Care Labs, Inc. does offer a commercial grade dispenser called a HydroSprayer. It is not required for using Zaps It.
